Pangrams

A *pangram* is a string that contains every letter of the alphabet. Given a sentence determine whether it is a pangram in the English alphabet. Ignore case. Return either `pangram` or `not pangram` as appropriate.

Example

$s = $ 'The quick brown fox jumps over the lazy dog'

The string contains all letters in the English alphabet, so return `pangram`.

Function Description

Complete the function *pangrams* in the editor below. It should return the string `pangram` if the input string is a pangram. Otherwise, it should return `not pangram`.

pangrams has the following parameter(s):

- *string s:* a string to test

Returns

- *string:* either `pangram` or `not pangram`

Input Format

A single line with string s.

Constraints

$0 < \text{ length of } s \leq 10^3$
Each character of s, $s[i] \in \{a - z, A - Z, space\}$
